# INSTALLATION INSTRUCTIONS

Homeowners should hire an installation team and pay for the installation fee (using labor at the construction site) to ensure that the installation of the bathtub is safe and convenient. The sequence and method of installation are as follows:

## A. Before installation:

- Keep the product intact and in its original packaging inside the house and do not leave it outside. High temperatures will create high humidity inside the PE film layer of the product, causing discoloration and peeling of the product's enamel layer.
- Do not remove the packaging until installation.

## B. During installation:

- Install the bathtub last when the room is complete to avoid collision with the product by the construction team.
- The product should still be in its original packaging when being transported into the room for installation.
- Keep the product in its package while carrying it into the room to avoid hitting the door or other objects.

# INSTALLATION INSTRUCTIONS

## C. Attention:

- Do not let cement or paint fall on the surface of the product.
- Do not let the product come into contact with cleaning agents containing hydrochloric acid or other corrosive substances; in case of contact, rinse immediately with water.
- There must be a plan to store the product during installation before it is put into use: warn all construction teams in the vicinity of the product not to place any objects or tools in the washbasin that may scratch, damage or dirty the product during the construction process in the bathroom area.
- Do not let flames from the gas torch, welding sparks, cigarette butts, etc. fall on the product.
- Ensure that the appropriate number of people are available to carry the product.
- Do not drag the product on the floor to avoid damage.

Scratches or cracks that occur during installation and use are beyond the scope of our warranty.

# INSTRUCTIONS FOR USE AND MAINTENANCE

We recommend using regular soap and a soft cloth to clean dirt and regularly cleaning to prevent dirt buildup.

- Do not use industrial detergents, Duck, Vim, or other strong cleaning agents as they may damage the surface of the product.
- Please note that heavy, hard or sharp objects should not fall onto the product.
- Do not press burning cigarettes onto the surface of the product as this will leave burn marks.
- Avoid placing hair clips or items that are prone to rusting on the product to avoid difficulty in cleaning rust marks.
- The product should be regularly cleaned. The drain should be thoroughly cleaned after each use, as hair and other debris can accumulate and reduce drainage capacity.
- Do not pour paint, oil, strong acids, strong alkalis, or organic solvents (such as acetone, dimethylbenzene, cellulose paint, etc.) into the product.

A modern bathroom with a freestanding bathtub, a large potted plant, a round mirror, and pendant lights. The scene is dimly lit, creating a warm and cozy atmosphere. The bathtub is white with a wooden base. A large green plant is on the left. A round mirror is on the wall above the tub. Two pendant lights hang from the ceiling. A small table with a basket is on the right.
